EXECUTIVE SUMMARY

Tech+Ball Mission

To promote and grow the sport of tech+ball genre in the United States and develop athletes to achieve competitive excellence and professional development then an Olympic success.

Public Interest or Institute Mission

The mission of tech+ball public interest is a strategic plan to develop the sport genre of tech+ball in America by creating reciprocal club competition opportunities.

Vision of Success in the Year 2030

By the year 2030, we will see results from the success of our public mission and Institute mission in the United States & Internationally. Athletes will participate in tech+ball from early age through public tournaments or institute tournaments and towards the National teams and professional clubs with semi- professional experience being a bridge from grassroots to the professional club NIBLS, Inc. In support of transcending our tech+ball genre we will be running collaborative networking sports and play tournaments with team handball clubs nationally or/and internationally, not excluding technology ball research and development programs, but also studying algorithmic strategies improving our trading system; Alike studies from finance reporting and understanding predictable averages in time/months/years, real-time calculations in each quarter, trades of the best times and higher productivity, and trading exits using various management methods. We are going to be creating and picking up to 10 different options of realistic methods to follow and long shot one's that we do not think we can follow. Our team will track each trade on how it did on those management's, making notes and maintaining a running log at the end of each day to how those managements are doing. Our teams & Institutes will keep track for at least 6 to 8 months with each method. Our team managing with founders will study up days, down days, sideways days, Earning environment, non-earnings environment, FOMC, big gap ups and down days. Also, recognizing size of transactions relevant to fee rates by bytes. Clubs are competing with other sports for the best athletes, and scholarships providing significant support to athletes. We'll have paid trainings for career pathed athletes. Tech+Ball systems media presence is important to engaging the youth, we will commit to introducing academic enlightenment local within easy travel distances. Weekends and weeknights our community will practice towards a hit national championship in competitive sport challenges. Putting the dream of a tech+ball career in their minds eye everywhere in the universe. Young athletes are walking to practice or traveling to school showcasing practice moves from team handball, football, or rugby. Social media are arguing over controversial questions whether these sports ball games are just for training for the future of team handball, football, or rugby. And will it be better with new blockchain technology from launch 2018 for Olympic gold medal teams in 2028. Will the women's club talent eclipse the men in popularity establishing as a major sport in America.

COMPANY MISSION

2021 to 2028 Goals

- (1) Create a comprehensive and streamlined starter pack to allow all responsible collegiate school students to create a college tech+ball club or program in a semester and supplying a resource person.
- (2) Have sustainable clubs playing 15 games per season in 72 colleges, including 36 women's teams.
- (3) Have the structures and systems in place to grow participation of public college club players by 400%
- (4) Assemble the necessary capacity to achieve the goals of this plan.
- (5) Raise sufficient funds to achieve the goals of this plan.

GOALS AND OBJECTIVES

Goal 1. streamlined starter pack

- 1.1 Create boilerplate documentation constitution, club by laws, goals
- 1.2 Finalize and supply tech+ball in a box
- 1.3 Provide necessary equipment
- 1.4 Provide support from NIBLS, Inc ambassador

Goal 2. Have sustainable clubs playing 15 games per season in 72 colleges including 36 women's teams.

- 2.1 Recruit colleges
- 2.2 Establish new clubs in locations with a concentration of colleges based on receptivity and leadership
 - 2.2.1 Achieve 50 colleges by end of 2024
- 2.3 Provide competition structure leading toward a National Championship in order to enable the best teams in the country to play each other
 - 2.3.1 Consider 3-7 format structure to cross-regional competitions
 - 2.3.2 Publish competition structure well in advance to enable maximum participation
- 2.4 Develop and implement a path to ensure club successful continuation of administration
- 2.5 Provide support from tech+ball ambassadors and NIBLS, Inc executives

Goal 3. Grow participation of public tournaments and club players 400%.

- 3.1 Raise the profiles of tech+ball on social media, print media, and billboard.
 - 3.1.1 Implement our marketing proposal promotion plan to have tech+ball recognized across the country.
 - 3.1.2 Offer resources for parents, coaches, athletes
 - 3.1.3 Focus on benefits of participation
- 3.2 In concert with team handball ensure a pipeline of athletes to join tech+ball club and trainings using the athlete development model.
- 3.3 Support established clubs with tech+ball's that can support teams in other collaborative genres.
- 3.4 Provide pathway for athletes post college, e.g. national team, city clubs, coach, referee, volunteering

Goal 4. Assemble necessary capacity to achieve the goals of this plan

- 4.1 Place staff on the ground by priority region
- 4.2 Create capacity for competitions, data management, athletic participation, public relations, - promotion and reporting, and fundraising strategies
- 4.3 Install a signal generation seating charts for members
- 4.4 Establish tech+ball collegiate and public committee
- 4.5 High frequency performance and governance programs

Goal 5. Raise funds sufficient to achieve the goal of this plan

- 5.1 Develop and implement a fundraising plan aligning uses sources of funds for every person or ambassador

1. CUSTOMERS

I. The purpose of Tech+Ball is:

- 1) Provide opportunity for public interest to learn participate and compete in the sports genre at a semi-professional /intercollegiate, and a professional level.
- 2) To accommodate the interests and abilities of athletes desiring to participate in the sport with particular emphasis on: a) Value of teamwork, sportsmanship, and competition b) Learning the strategies and finer skills of the sport c) Competing with clubs and teams from other schools or organizations d) Making friendships, building opportunities for a better environment, and improved traditional civic awareness e) Building economic growth and preventing poverty

II. Eligibility

Anyone who is signed up and register with a training and/or tech+ball product will register as a user and process their fingerprint query for classification of user's profile identity. This helps us not only with discovery of skills attributes, but also protects the owner of the technology ball if your product is lost or stolen.

III. Dues and Requirements

Members of the tech+ball product subscription shall be in good standing and keep up with service fees weekly or monthly: a) Members will be charged for services like wi-fi and data storage. b) Members will select an athletic training, free-play, exhibition, or tournament style service. c) Selecting these services, you will be classified for how you are using the technology ball. d) Other friendly features are: Eligibility for participants to participate using team building profile creation (Restriction with this feature may apply to those users with governance and policy). those users are e) Eligible to participate and play exhibitions or tournaments with that feature. Official owners will still pay their regular dues by date. f) Each athlete is required to train and attend tournaments then complete an estimate of 10,000 hrs. to become a professional athlete.

g) 32 hours a week for exhibitions, trainings, and semi-professional tournaments.

g 1. - Full game = 16 minute

g 1.2 - 20 games = 5hrs/day

g 1.3 - 4 games = 1 hr. 4 minutes

g 1.4 - 128 games in a week = 32 hours a week

g 1.5 - 128 hours = 1 month

g 1.6 - 1,536 hrs. = 1 year

3. Legal Structure

C Corporation

4. Market Research

4.1 Industry

The global sports technology market size was valued at USD 11.70 Billion in 2020 and is expected to register a compound annual growth rate (CAGR) of 16.8% from 2021 to 2028. Our industry has a focus in cloud computing, IoT, AI/ML, Analytics, Big Data, Blockchain hardware, across various sports like rugby, American Football, And Team Handball

5. Customers

- Athlete's male & female Ages 8+
- Fitness training
- Sports clubs and sports teams

5.1 Competitors

- Dribble Up App using sports technology collecting biometric data using a recording app for soccer, boxing, basketball, & strength balls.

Supporting Reference

[Dribbleup.com](https://dribbleup.com)

5.2 Competitive Advantage

Tech+Ball is a technology that can discover athletes in any environment using a special fingerprint sensor that covers the outer layer of the technology ball. The advantage of using this invention is also that we can use it with other genre sports for advance training purposes regarding skills in ball controlling and passing like long distance, short distance throwing,

strength, successful catches, and passes. We also have a motion sensor goal device that tracks scores & a sports EWallet for trading and/or storage of tokens.

6. Regulations

6.1 Tech+Ball will pay athletes to train starting from \$350 a month with increases as athlete's performance skills improve.

6.2 Users will have Wi-Fi & data plans that are:

- a) Pre-paid user accounts
- b) Monthly membership user accounts
- c) Yearly membership user accounts
- d) Family memberships Account

note: 24/7 access to your accounts balance, device memory, and player summary cards with tech support.

7. Product Service Line

7.1 Product and service

- a) Tech+Ball – Fingerprint sensor ball
(Rugby ball, Team Handball, American Football, Tech+Ball)
- b) EWallet – Sports Heartrate monitor EWallet, wrist watch EWallet, wristband EWallet c)
Goal Device – Motion sensor goal device

7.2 Price Structure

- a) Hardware bundle priced starting at an estimation of \$350+
(Price can change due to manufacturing quality and product memory space)
- b) Subscription service
\$50 weekly / pre-paid plan
\$200 monthly / monthly plan
price may vary for family package plan based on number of members
- c) 64 GB ram, 256 GB ram, 512 GB ram, 1 TB ram memory chip

8. Product and service life cycle

a) Use

Tech+Ball's are primarily used for the sport genre tech+ball.

Tech+Ball is a biometric tracking and measuring sport that streams sports statistics to blockchain for algorithmic sports trading. Tech+Ball offers a professional club organization and paid to train before drafting opportunities using proof of data with blockchain rewarding athletes with tokens.

b) Disposal

If you can no longer use the ball at all you can donate it or resell it back to corporation. Not excluding it away.

c) You can recycle tech+ball by donating them to charities, group homes, or schools. You could give to a neighbor or family member.

d) Process

To make fingerprint technology ball:

Qualcomm manufactures an ultra-thin sonic fingerprint sensor; Ultra-scan is an ultra-sonic thin film transistor founded by ultra-scan corporation. Ultra-scan uses high frequency ultra sound technology as a method for capturing live scan fingerprint imagery. It's the first non-optical 4-finger sensor.

e) Manufacture

Reference NIBLS, Inc webpage for further details below

- Assembly, resources, and materials.

8.1 Research & Development

- We will be constantly focused on building a better technology and advancing for an improved

design and usage for customers.

- Our goal will focus on assembly, resources, and quality materials like carbon fiber, silicone, and graphite that will make our technology ball fly faster, higher with drag, & lighter.
- Increase accessibility
- Predictable liabilities - durable instance chip (understanding durability's in real-time).
- We plan to test quality of designs and research and develop quality computer chips to compute statistics faster in real-time. We will be testing security, data latency, & reliability.
- We will also be designing our own fingerprint technology specialize for our biometric ball.
- Build a quantum computer chip research program.
- Build a pipeline of computer programmers, manufactures, designers, write and test full functional products.
- Work closely with software developers for product market fit.
- Build partnerships for project deployment and oversees development process of teams at all stages of manufacturing.
- Study ball axis's, routes, and landings.

-Tech+Ball wants to design the microchip to receive updates in the ball compatible with the index price changes on the NIBLS Coin intelligent portfolio Application, at down to Nano-second intervals we can research and develop more accurate prices before customers receive the next processing sport trade. This gives us an extremely important advantages in the market. Given that regular household traders usually receive updates on much slower time scales because its coming from a source of journalist statistics. In addition, while team/player indexes are being traded on a Nano-second time scale, **the market index values should display on a time scale of eight seconds**

— a time difference that provides a significant advantage to high-frequency traders will allow us too so understand performance event's in real-time (Performance-Based on the time advantage scale). This is known as general high-frequency trading , where trader's can execute trades within the longer time intervals during which the index is calculated, and thus affect the index, which in turn will affect other stocks. **Our Goal is to investigate the relationship between In -game playing event activity with the market index (Performance data prices in real-time scales that are shorter than the update intervals of a sports team/player's index). Both products should considerably be made up of 1025 days or 36 -months with 1681 time records of 8 to 15-second intervals for each day without and with the microchips.**

a) The primary goal of **scalping is to capitalize on short-term market inefficiencies and price fluctuations, making quick profits from small price differentials.** This microchip should allow us to find **profitable margins faster** in the advantages of in time scales.

b) **Hedging** odds calculations will be in use affected by before historical data and during real-time events.

c) **Arbitrage** basket's of different indexes in the markets will be affected.

- A **Tech+Ball (smart ball) microchip** will allow us to use technical indicators for event patterns to identify the advantages of in time scales. Our product algorithm's can be programmed to analyze multiple indicators (speeds and distance etc.) simultaneously. **Making sophisticated and data-driven decision on our intelligent portfolio** we will able us to **adjust trading strategies in real-time.**

- **A Microchip tick offset** with a set of rules, when applied to the given input data generate entry and exit signals (buys/sells) **the API 's microchip will adapt to changing market conditions. Using generational memory our microchip tick offset will compute and know to communicate with portfolio application to seize opportunities before they arise.** Also, using our microchip to identify what athletes have the **best in-game habits in real-time:** too articling our star athlete's who increase the portfolio success outcomes frequently even in high volatility periods).

Too **investigate the relationship between the two products** we will be using **cross-correlation analysis** (see Methods). We first determine the average sample cross correlation function (XCF) as a function of the lag. The averaging is done across all the days in each of the three groups.

9. Marketing and Sales

9.1 Growth Strategy

We are going to donate to locals, tournaments, and create teams with public and collegiate interest. We will be studying predictable averages of individuals, teams, and trading system strategies. This will help us to make decisions for our company at a professional level and have a more characterized description of athletes and teams on how each individual club make money at various management methods for day trades or professional automated trades. Strategies that will help grow we will be testing from wealth management are statistical arbitrage, trend following, market making, momentum, mean reversion, and sentiment.

9.2 Communication

Our team will hire growth hackers to engage customers to train and participate at sports challenges. The teams for tech+ball clubs will hold practices weekly at a time determined at the beginning of each term. All members should make every effort to attend all practices. Public relations manager will work with managing council in all aspects of the club and will be responsible for updating media outlets in order to promote tech+ball genre sports. All collegiate leaders will provide leadership and act in accordance with the managing council or directors to promote and develop the sport of tech+ball. Reciprocal clubs will receive funding from college and University council and through fundraising activities. The clubs will expend funds for equipment, travel, tournaments fees and associations dues.

Committees and /or divisions maybe formed in tech+ball as deemed necessary by managing council:

The clubs are designed to promote and develop the sport in NYC or state city local community. The club will teach members the rates and skills required to enjoy and compete in tech+ball. Through practice and competition, the members will experience the rewards, associated with group interaction, training, and competitive play. The club will focus on the current and future development of the sport of tech+ball at the university, regional, and state levels.

The club is open for participation by all members of the university community regardless of race, religion, age, handicap, national origin, sexual orientation, or veteran status. The members shall be registered student, faculty, staff, or members of the community of the city or state.

Clubs will meet/practice at least twice a week with team meetings unlikely to exceed four in any given week. Meetings will generally be communicated through email and /or website notification, group text, periodically throughout the year.

Managing councils, will consist of the president, vice president, treasurer, operations coordinator, public relations manager, and the faculty advisor.

Tech+Ball Hub Accelerator:

<https://www.canva.com/design/DAFkKfevFd8/5e-XqoywEGR5PG5I4oJwXg/edit>

President and VP

Shall lead and direct the managing council and the club, focusing on the promotion and development of teams in community and in the state, they will initiate and strive to achieve the goal of the genre, concentrate on the current and future development of tech+ball , and will work coordination with the faculty advisor to call meeting and keep the tech+ball clubs organized and functional. Additionally, the president will be responsible for scheduling and organizing scrimmages and tournaments at the state and national level, while the vice president will lead recruitment efforts for the clubs. The treasure will control budget, and regulate the finances of the clubs. Additionally, the treasure responsible for maintaining a written record of all club meetings and activities as requested by the president and/or faculty advisor. The operations coordinator will work with the managing council in all aspects of the club. They will organize the ordering and distribution of Jersey for Jerseys for the members and be responsible for the equipment of the and university.

- Radio Ads, TV Broadcasting, Streaming media, podcast, TV commercial Ads, Print media

10. Prospects

- Fitness trainees
- Athletes from colleges and University levels - Public interested individuals
- Children Ages 8+
- Fitness trainers
- Coaches
- Sports Tech enthusiast
- Wealth Managers
- Sports traders
- Blockchain enthusiast

11. Financial Projection

Discount Cash Flow Model

note:

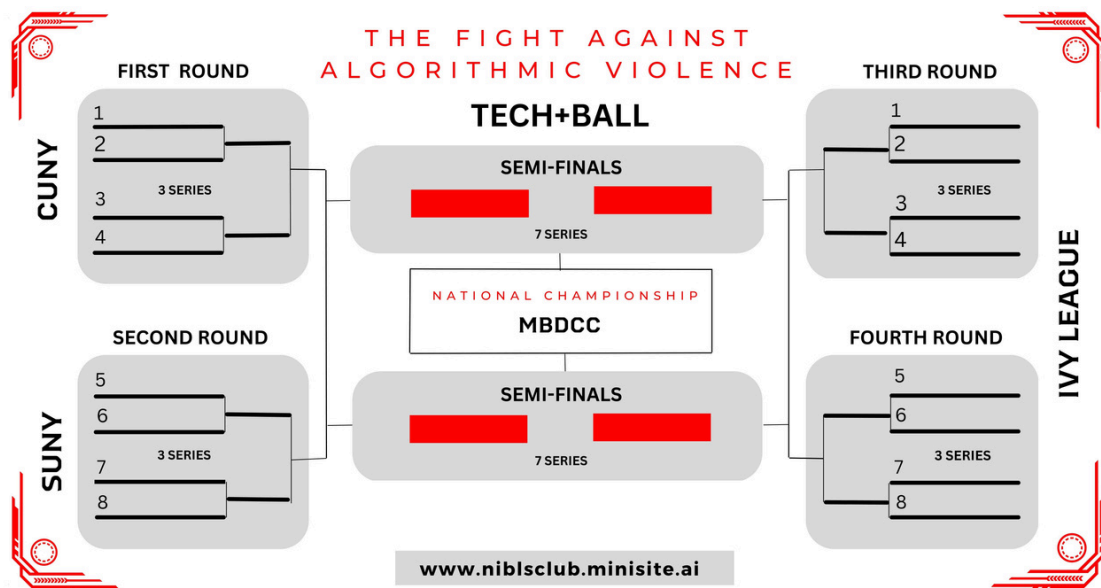

#1

- When technology is manufactured with a selected company for our product a financial future cash flow projection will be created based on deployment and official cost to make all hardware w/ packaging.
