Section 12 — Disclaimer

SECTION 1

Executive Summary

The **BLEI-E Index** (Bledsoe Enlightenment Performance Research Index) is a proprietary, solo-athlete quantitative research index developed and authored solely by **Dashawn Ramel Bledsoe**, Blindside Flanker, New York Rugby Club (NYRC), Division I USA Rugby. The BLEI-E Index represents a first-of-its-kind individual athlete performance data asset in the US club rugby market — a market that is severely underrepresented in institutional quantitative research.

The index is derived from real-time **BiomechFlow Capsule** biomechanical data captured during live training sessions and competitive matches at NYRC. Six sensor-driven capsule zone outputs are translated into individually weighted performance sub-scores, which are aggregated into a single weighted composite — the **BLEI-E Score** — updated per training session and match event.

The six factors tracked are: **Contact Power Index, Drive & Fatigue Load, Recovery Velocity, Injury Risk Premium, NIL Momentum Score**, and **Substitution Probability**. Together, these factors produce a holistic, machine-readable performance signal calibrated specifically to the demands of the Blindside Flanker position.

The BLEI-E Index is designed for licensing to **quantitative research firms, sports analytics companies, and financial institutions** as a novel, underrepresented data asset. As an individually authored and held instrument, no corporate entity is

required to own or license this index. Intellectual property rights vest entirely in Dashawn Ramel Bledsoe as individual author and data controller.

● **Key Value Proposition**

US club rugby biometric performance data is among the most underrepresented datasets in the global sports analytics market. The BLEI-E Index provides a structured, session-logged, methodologically rigorous time series — purpose-built for institutional research licensing — in a data category where supply is near-zero and institutional demand is growing.

The index grows in research value as session logs accumulate. A minimum of 20 sessions constitutes a statistically significant time series suitable for initial quantitative research application. At full Phase 3 maturity, the BLEI-E dataset represents a licensable, revenue-generating performance data asset with potential to underpin structured financial instruments.

SECTION 2

Index Architecture: The 6-Factor BLEI-E Model

The BLEI-E Model draws its six factors directly from the six output zones of the BiomechFlow Capsule sensor array. Each zone encodes a distinct biomechanical or performance signal. Weights are assigned to reflect the positional demands of the Blindside Flanker role in Division I USA Rugby competition.

Score Range: 0–100 | Target Operating Range: 60–85

Scores below 60 indicate elevated fatigue, injury risk, or performance degradation. Scores above 85 indicate peak performance windows — high-value windows for NIL activation and licensing demonstration events.

Factor 1 — Top Arc (Weight: 25%)

Contact Power Index. Measures acute mechanical stress through ground reaction force and tackle impact loads. This is the *primary* Blindside Flanker metric — the quantitative representation of physical dominance at the point of contact.

- **Raw Inputs:** Tackle Force (Newtons) + Shoulder Contact Angle (degrees)
 - **Trigger Threshold:** Acute stress spike >+20% above session baseline
 - **Research Significance:** Highest weighted factor; directly correlates with match impact contribution and contact-position value
-

Factor 2 — Bottom Arc (Weight: 20%)

Drive & Fatigue Load. Encodes accumulated fatigue and fatigue acceleration, expressed through HRV decay and workload indices over the course of a session or match.

- **Raw Inputs:** Sled Push Velocity (m/s) + Shin Angle (degrees) + HRV Decay Rate (%/min)
 - **Trigger Threshold:** Fatigue color-zone shift to red (critical fatigue state)
 - **Research Significance:** Second-highest weight; fatigue load is a primary leading indicator for injury risk and substitution probability
-

Factor 3 — Center Line (Weight: 15%)

Recovery Velocity. Measures the speed and quality of short-term recovery between high-intensity efforts — a critical determinant of sustained output across 80-minute match duration.

- **Raw Inputs:** HRV Recovery Slope (bpm/sec) + Inter-Effort Rest Period (seconds)

- **Trigger Threshold:** Recovery slope divergence detected (>15% below session average)
 - **Research Significance:** Strong predictor of second-half performance maintenance; critical for sub probability modeling
-

Factor 4 — Right Bar (Weight: 15%)

Injury Risk Premium. Quantifies real-time injury risk as a composite score — acting as a drag coefficient on the overall BLEI-E Score and an inverse signal for NIL valuation.

- **Raw Inputs:** Joint Divergence Score (%) + Cumulative Impact Vector (Newton-seconds)
 - **Trigger Threshold:** Injury risk elevation >+15% above session baseline
 - **Research Significance:** Negative weighting interpretation — elevated injury risk depresses BLEI-E composite; relevant for insurance and risk-product applications
-

Factor 5 — Glow Ring (Weight: 15%)

NIL Momentum Score. Tracks NIL (Name, Image, Likeness) momentum — engagement acceleration, highlight reel probability, and sponsor activation windows — as a quantified commercial performance signal.

- **Raw Inputs:** Social corroboration feed spikes + Highlight Frequency (clips/session) + Engagement Rate (%)
 - **Trigger Threshold:** Momentum surge >+25% above rolling 7-day average
 - **Research Significance:** Bridges athletic performance data with commercial valuation — a novel data point for sports finance and NIL-adjacent research applications
-

Factor 6 — Left Bar (Weight: 10%)

Substitution Probability. A model-derived probability score estimating the likelihood of mid-match benching based on real-time fatigue state, performance metrics, and coach substitution pattern modeling.

- **Raw Inputs:** Sub Probability Model Output (0–100%)
- **Trigger Threshold:** Sub probability >60%
- **Research Significance:** Acts as a composite confirmation signal — when elevated alongside Bottom Arc fatigue load, signals compounding performance deterioration

Score Range: 0 – 100

|

Target Operating Range: 60 – 85

Factor	Capsule Zone	Weight	Primary Raw Input	Trigger Condition
1 — Contact Power Index	Top Arc	25%	Tackle Force (N) + Shoulder Contact Angle	Stress spike >+20%
2 — Drive & Fatigue Load	Bottom Arc	20%	Sled Push Velocity + Shin Angle + HRV Decay Rate	Fatigue zone shift to red
3 — Recovery Velocity	Center Line	15%	HRV Recovery Slope + Inter-Effort Rest Period	Recovery slope divergence
4 — Injury Risk Premium	Right Bar	15%	Joint Divergence Score + Cumulative Impact Vector	Risk elevation >+15%
5 — NIL Momentum Score	Glow Ring	15%	Social feed spikes + Highlight Frequency +	Momentum surge >+25%

Factor	Capsule Zone	Weight	Primary Raw Input	Trigger Condition
			Engagement Rate	
6 — Substitution Probability	Left Bar	10%	Sub Probability Model Output	Probability >60%

SECTION 3

Data Capture Protocol: The 24-Method HEDGE Module

The operational data engine of the BLEI-E Index is the **24-Method HEDGE Module** — a structured telemetry and event-logging protocol that maps every meaningful biomechanical signal to a defined index trigger, hedge condition, or escalation event.

Methods 1-12: Hedge, Exit, and Arbitrage Triggers

The first twelve HEDGE methods govern primary performance signal capture and are mapped directly to capsule zones. These methods define the conditions under which hedge actions, score adjustments, or scoring resets are applied to the BLEI-E composite.

Method #	Method Name	Capsule Zone Mapping	Function
1	Contact Force Capture	Top Arc	Records peak tackle force per contact event in Newtons
2	Impact Angle Log	Top Arc	Logs shoulder contact angle per tackle; flags aberrant mechanics
3	Stress Spike Arbitrage	Top Arc	Triggers hedge flag when stress spike >+20% above session mean

Method #	Method Name	Capsule Zone Mapping	Function
4	Sled Push Velocity Capture	Bottom Arc	Records drive velocity per sled repetition (m/s)
5	Shin Angle Encoder	Bottom Arc	Encodes dorsiflexion/shin angle at peak drive; fatigue proxy
6	HRV Decay Rate Monitor	Bottom Arc	Tracks HRV degradation rate per session block; triggers red zone flag
7	Recovery Slope Tracker	Center Line	Calculates HRV recovery slope between efforts in bpm/sec
8	Inter-Effort Rest Logger	Center Line	Timestamps rest intervals; computes rolling recovery efficiency ratio
9	NIL Feed Spike Monitor	Glow Ring	Scrapes social corroboration feed; detects momentum surge events
10	Highlight Clip Counter	Glow Ring	Logs highlight reel clip generation frequency per session/match
11	Engagement Rate Calculator	Glow Ring	Computes aggregate social engagement rate; feeds NIL Momentum Score
12	Sub Probability Score Engine	Left Bar	Outputs substitution probability score (0-100%); triggers at >60%

Methods 13-20: Advanced AR Scenarios

Methods 13 through 20 govern augmented reality overlay processing and advanced scenario modeling. These methods use Illumix AR/3D overlay technology to project real-time biomechanical data fields during active training and match play.

Method #	Method Name	Function
13	AR Contact Zone Overlay	Projects tackle contact force heat maps via Illumix AR in real time
14	AR Fatigue State Visualizer	Renders live fatigue color-zone state over athlete silhouette in AR
15	AR Recovery Corridor Projection	Projects optimal recovery time-window corridors between high-intensity efforts
16	AR Impact Vector Display	Renders cumulative impact vectors in 3D space for joint load analysis
17	AR Sub Probability Gauge	Displays live substitution probability gauge during match play
18	AR NIL Moment Flag	Flags high-NIL-value moments in real time for clip capture prioritization
19	Multi-Session Trend AR Layer	Overlays rolling 5-session performance trend lines on live session data
20	Score Dashboard AR Overlay	Renders real-time BLEI-E composite score in analyst AR view

Methods 21-24: Medical Escalation Protocol

Methods 21 through 24 constitute the Medical Escalation tier — advanced detection algorithms that monitor for conditions requiring immediate clinical review. Triggers in this tier auto-generate a Medical Flag entry in the Custodian Snapshot Log.

Method #	Method Name	Description	Escalation Action
21	Spatial Collapse Prediction	Detects progressive spatial orientation degradation — early concussion and exhaustion indicator	Medical Flag + session halt recommendation
22	Impact Vector Overload	Flags cumulative impact vector	Medical Flag + Right Bar penalty

Method #	Method Name	Description	Escalation Action
		exceeding safe exposure threshold within single session	applied to BLEI-E
23	Joint Divergence Detection	Identifies joint angle divergence from biomechanical baseline — ligament and tendon stress indicator	Medical Flag + Right Bar trigger; clinical review required
24	Spatial Recovery Envelope Breach	Detects failure of spatial recovery metrics to return to baseline within expected recovery window	Medical Flag + Bottom Arc red zone lock; session exit recommended

Technical Capture Specifications

- **Sensor Technology:** IMU (Inertial Measurement Unit) telemetry array embedded in BiomechFlow Capsule
- **Visual Capture:** Performance camcorder at 1080p / 60fps; synchronized with IMU timestamps
- **AR Platform:** Illumix AR / 3D overlay engine for real-time biomechanical field visualization
- **Snapshot Cadence:** 1–3 seconds per cycle in live game mode; 5–10 seconds in training mode
- **Immutable Log Fields:** Timestamp | CapsuleCycleID | TriggerValue | AnalystID
- **Ledger:** All snapshots immutably logged to custodian ledger; tamper-evident chain of custody
- **Data Governance:** SHIELD Act compliant; NYC Local Law 3 compliant
- **Security:** All biometric data encrypted at rest and in transit; role-based access control enforced

SECTION 4

Session-by-Session Index Log Template

Every training session and competitive match generates one BLEI-E Session Log entry. The log is the primary raw data asset of the index — its completeness, consistency, and timestamp integrity determine the research value of the dataset. All fields are mandatory. Incomplete entries are flagged for correction before custodian submission.

Field	Description	Format / Example
Session ID	Unique alphanumeric identifier for session	BLEI-E-2026-001
Date	Session date	2026-06-26
Venue	Training facility or match ground	NYRC Training Ground, New York
Session Type	Nature of session	Training / Match / Scrimmage
Top Arc Score	Contact Power Index sub-score (0-100)	72.4
Bottom Arc Score	Drive & Fatigue Load sub-score (0-100)	65.1
Center Line Score	Recovery Velocity sub-score (0-100)	68.8
Right Bar Score	Injury Risk Premium sub-score (0-100)	74.2
Glow Ring Score	NIL Momentum sub-score (0-100)	61.5
Left Bar Score	Substitution Probability sub-score (0-100)	77.0
BLEI-E Composite Score	Weighted composite per formula	69.8
Triggers Fired	List of HEDGE Methods triggered this session	Method 3, Method 6
Hedges Executed	Score adjustments or hedge actions applied	Bottom Arc penalty: -2.1pts
Medical Flags	Methods 21-24 activations; clinical notes	None / Method 23 — Joint Divergence

Field	Description	Format / Example
NIL Activation Events	Highlight clips captured; social spikes logged	2 clips; engagement spike +31%
Custodian Snapshot ID	Immutable ledger snapshot reference	SNAP-CYC-20260626-0047
Notes	Analyst observations; contextual factors	Post-travel fatigue; wet pitch conditions

Sample Session Log Entry

Ses sion ID	Dat e	Ven ue	Typ e	Top Arc	Bot. Arc	Ctr. Line	Rt. Bar	Glo w Ring	Lt. Bar	BLEI -E	Trig gers
BLEI-E-2026-001	2026-06-26	NYR C Training	Train ing	72.4	65.1	68.8	74.2	61.5	77.0	69.8	M3, M6
BLEI-E-2026-002	2026-07-03	NYR C Training	Train ing	—	—	—	—	—	—	Pending	—

SECTION 5

BLEI-E Score Benchmarking

The following benchmark ranges provide comparative context for BLEI-E Score interpretation across athlete tiers. Benchmarks are derived from positional norms for Blindside Flanker performance data, HRV-based athletic performance research, and rugby-specific workload literature.

Athlete Tier	BLEI-E Score Range	Interpretation	Research Status
Elite Professional Rugby Player	78 - 88	Elite physiological baseline; sustained high-contact output with managed fatigue and rapid	Gold standard reference tier

Athlete Tier	BLEI-E Score Range	Interpretation	Research Status
		recovery	
Division I Club Peer (NYRC)	58 - 72	Competitive club level; intermittent fatigue spikes; variable recovery quality	Comparable peer cohort
Rookie Baseline — Dashawn Current Target	55 - 68	Early-phase index; dataset building; score volatility expected in first 10 sessions	Active — dataset accumulating
Index Growth Target (12 Months)	65 - 78	Target composite range post-12 months of consistent session logging and training optimization	Phase 3 goal state

Dataset Maturity and Research Value Thresholds

Sessions Logged	Dataset Maturity Stage	Research Value Assessment
1 - 5	Initialization Phase	Pre-statistical; baseline calibration only
6 - 10	Early Accumulation	Trend direction emerging; not yet statistically significant
11 - 20	Statistically Significant Threshold	Sufficient for preliminary quantitative research application; initial licensing conversations viable
21 - 40	Licensable Dataset	Full licensing pitch supported; seasonal trend visible; multi-factor correlations extractable
40+	Mature Research Asset	Publishable research support; bond instrument underwriting consideration; multi-year time series

- **Research Asset Value Principle**

The BLEI-E Index value as a research asset is monotonically increasing with dataset size. Six months of consistent session logs creates a statistically significant time series. Twelve months of logs produces a dataset with sufficient depth for academic publication, institutional licensing, and structured product consideration.

SECTION 6

Intellectual Property Ownership and Legal Protection

The BLEI-E Index, its methodology, its factor weighting architecture, its composite formula, and all derivative session log data are authored solely by **Dashawn Ramel Bledsoe** as an individual. No corporate entity is required to hold, register, or enforce these rights. The following four-step protocol is the recommended IP protection sequence.

Step 1 — Copyright Registration

File a copyright registration for this index methodology document at **copyright.gov**. Registration cost: **\$65**. Copyright registration establishes a public record of authorship and ownership date — creating a legally defensible timestamp for the methodology. In the event of infringement, registration is required to pursue statutory damages in federal court.

Step 2 — Timestamped Version Log

Maintain a dated version log for all BLEI-E methodology updates. Every material change to factor weights, trigger thresholds, or data capture protocols should be documented with a version number, date, and description of changes. This log supports authorship continuity claims and demonstrates active stewardship of the index.

Step 3 — Non-Disclosure Agreement (NDA) Requirement

Never share raw session data, detailed factor methodology, or the composite formula with any third party without a **signed, executed NDA** in place. All outreach communications should reference the BLEI-E Index at a high level only. Full methodology disclosure occurs only post-NDA and upon initiation of formal licensing negotiations.

Step 4 — Sports IP Attorney Review

All licensing agreements, NDAs, and any financial instrument documentation must be reviewed by a qualified sports intellectual property attorney before execution. The following NYC-based firms are recommended for initial consultation:

Firm	Specialty	Notes
Romano Law NYC	Entertainment, sports, and IP law	New York-based; athlete representation experience; accessible to individual athletes
Heitner Legal	Sports law and NIL	Specialized in athlete NIL agreements and individual athlete IP; strong sports data experience
Ropes & Gray — Sports & Entertainment Practice	Complex sports transactions, IP, and finance	Elite-tier firm with structured finance and sports law crossover capability; suitable for bond instrument consultation

SECTION 7

Solo Data Licensing Agreement Framework

The BLEI-E Index may be licensed as a standalone data asset under a **Data Licensing Agreement (DLA)** executed directly between Dashawn Ramel Bledsoe (as individual Licensor) and a qualifying research firm or institution (Licensee). No corporate intermediary is required. The following outlines the standard DLA term structure.

DLA Term	Specification
Licensor	Dashawn Ramel Bledsoe (Individual)
Licensee	[Research Firm / Institution Name] (to be specified per agreement)
License Type	Non-exclusive, revocable research license. Licensor retains full ownership of index, methodology, and all underlying data.
Data Scope	BLEI-E session logs, composite scores, and published methodology. Raw biometric data (IMU telemetry, HRV streams) requires separately negotiated addendum and is subject to additional data protection terms.
License Term	12 months, renewable upon mutual written agreement
Fee Structure — Base	Flat monthly research fee: \$500 – \$2,000/month (scaled by firm AUM, revenue, or research budget as negotiated)
Fee Structure — Revenue Share	5% – 10% revenue share on any published research, commercial product, or derivative instrument based on BLEI-E index data
Restrictions	No resale, sub-licensing, assignment, or public disclosure of raw data or methodology without prior written consent of Licensor
Audit Rights	Licensor retains the right to audit Licensee's data usage, citation, and derivative product scope on a quarterly basis
Termination	30-day written notice by either party; all data copies returned or certified destroyed upon termination
Governing Law	State of New York; venue in New York County
Dispute Resolution	Mediation first; binding arbitration if unresolved; AAA Commercial Arbitration Rules

 Important — Legal Review Required

This framework is a structural outline only. All executed DLAs must be reviewed and

approved by a licensed sports IP attorney before signing. Do not execute any licensing agreement without qualified legal counsel.

SECTION 8

Target Licensing Partners

The following firms are ranked by fit for BLEI-E Index licensing outreach. Ranking is based on: (1) existing individual athlete data licensing channels, (2) known rugby data coverage gaps, (3) organizational appetite for novel biometric data assets, and (4) geographic proximity to New York.

Rank	Firm	Fit Rationale	Channel / Entry Point
1	Sports Data Labs (SDL)	Manages direct athlete data rights for professional associations; established individual athlete data licensing channel; highest structural fit for solo athlete licensor	Direct athlete data licensing portal; BD team outreach
2	Kitman Labs	Acquires novel sport performance datasets globally; rugby data underrepresented in their US portfolio; proactive partnership-acquisition model	Research partnerships team; conference outreach
3	Stats Perform	Global sports analytics leader; known US rugby data coverage gap creates direct licensing opportunity; large institutional client base amplifies index	Data acquisition and research partnerships division

Rank	Firm	Fit Rationale	Channel / Entry Point
		reach	
4	Two Sigma Sports <i>100 Avenue of the Americas, NYC</i>	Quantitative-focused; NYC-based — geographic alignment; academic and data partnership channel; quant methodological approach matches BLEI-E architecture	Data & research partnerships; LinkedIn cold outreach
5	Zelus Analytics	Sports science analytics firm with growing rugby coverage globally; BLEI-E fills a club-level US biometric gap in their dataset	Research team; academic conference circuit
6	Orreco	Athlete data and sports science; partnership-friendly with individual athletes; strong biometric and HRV data processing capability — aligns with BLEI-E's HRV-based inputs	Athlete partnership program; direct athlete inquiry channel

SECTION 9

Outreach Email Template

The following email template is designed for initial outreach to target licensing partners. Customize the recipient name, firm name, and any firm-specific details before sending. Do not attach methodology documents to initial outreach. Send NDA first upon any expressed interest.

To: [Recipient Name] — [Title], [Firm Name]

Subject: BLEI-E Index — Proprietary Rugby Performance Data Licensing

Inquiry

Dear [Name],

My name is Dashawn Bledsoe. I am a Blindside Flanker at the New York Rugby Club (Division I USA Rugby) and the sole author of the **BLEI-E Index** — a proprietary, session-logged quantitative performance research index built on BiomechFlow Capsule biomechanical data.

The index tracks six weighted performance factors — contact power, fatigue load, recovery velocity, injury risk, NIL momentum, and substitution probability — producing a composite score updated per training session and match. The methodology is copyright-registered, and all session data is immutably logged to a custodian ledger.

US club rugby biometric data is severely underrepresented in quantitative research. The BLEI-E Index represents a novel, individually authored data asset in this space — available for standalone research licensing directly from the athlete.

I am seeking a qualified data licensing partner for an initial 12-month research agreement. I am available for a 20-minute introductory call at your earliest convenience and am happy to provide a methodology summary under NDA.

Thank you for your time and consideration.

Dashawn "Matrix" Bledsoe

Blindside Flanker | New York Rugby Club (NYRC) | Division I USA Rugby

BLEI-E Index — Author & Licensor

[Email Address] | [Phone Number] | [LinkedIn Profile]

SECTION 10

Roadmap: BLEI-E Index Growth Path

Phase 1 — Foundation (Months 1–3)

- Copyright registration filed at copyright.gov (\$65)
- NDA template drafted and reviewed by IP attorney
- Minimum 10 session logs completed; baseline BLEI-E Score established
- Outreach initiated to 3 target licensing partners (SDL, Kitman Labs, Orreco)
- Version 1.0 methodology document finalized and timestamped

Phase 2 — Statistical Significance (Months 4–6)

- First formal licensing conversation initiated with at least one target firm
- Statistically significant dataset achieved: 20+ sessions logged
- Session log trend analysis completed: BLEI-E trajectory documented
- Social media presence developed documenting training via structured content — builds NIL Glow Ring baseline
- First NDA signed with an interested party

Phase 3 — First Licensing Revenue (Months 7–12)

- First Data Licensing Agreement (DLA) signed
- Research licensing fee revenue begins (\$500–\$2,000/month)
- BLEI-E Version 2.0 incorporating full match data (not just training sessions)
- Dataset depth: 40+ session logs; suitable for academic research submission
- Revenue share terms activated on any Licensee-published research

Phase 4 — Mature Asset & Structured Instruments (Year 2+)

- BLEI-E Index cited in at least one published quantitative research paper
- Sponsorship and endorsement value multiplied by demonstrated data credibility
- Potential structured instrument initiated: BLEI-E Bond Framework (see Section 11)
- Professional contract pursuit: BLEI-E data as supporting evidence of performance caliber
- Index dataset made available for academic licensing — expanded to peer-reviewed research channel

SECTION 11

Financial Instrument Future: The BLEI-E Bond Framework

The following is presented for research and conceptual purposes only. Nothing in this section constitutes financial advice, a securities offering, or investment solicitation. See Section 12 — Disclaimer.

As the BLEI-E dataset matures into a statistically significant, multi-year time series, it may serve as the underlying performance metric for a personal performance bond instrument — a novel application of athlete data monetization that extends beyond conventional NIL agreements.

Conceptual Bond Structure

Bond Component	BLEI-E Equivalent
Underlying Asset / Index	BLEI-E Composite Score — the quantified biomechanical and performance signal of

Bond Component	BLEI-E Equivalent
	Dashawn Ramel Bledsoe across a defined career period
Bond Value Indexing	Instrument value indexed to BLEI-E composite score growth over time; upward score trajectory drives principal appreciation
Coupon Equivalent	Ongoing licensing fee revenue from signed DLAs + sponsor activation income from NIL Glow Ring events
Maturity Trigger	Defined career milestone: professional contract signing, national team selection, or international rugby appearance
Reference Precedent	Analogous in concept to the Jalen Brunson Bond Index — which tied athlete market influence to a city bond structure — but BLEI-E ties biomechanical performance to a research licensing revenue stream rather than municipal finance
Key Distinction	BLEI-E is performance-data driven rather than market-influence driven; the underlying metric is scientific and sensor-verified, not social sentiment

Legal and Regulatory Requirements

Any actual issuance of a bond or security instrument linked to the BLEI-E Index would require:

- **SEC Registration** under the Securities Act of 1933, or a qualifying exemption — most likely **Regulation D, Rule 506(b)** for private placement to accredited investors
- Engagement of a **licensed broker-dealer** or FINRA-registered placement agent
- Full legal review by counsel qualified in **securities law and sports finance**
- A formal prospectus or private placement memorandum (PPM) disclosing all material risks

Regulatory Notice

No bond or securities instrument may be offered or sold without SEC compliance or applicable exemption. The BLEI-E Bond Framework described here is a conceptual research model only. Do not solicit investments or issue any instrument without qualified securities law counsel.

SECTION 12

Disclaimer

IMPORTANT — READ CAREFULLY

This document — the BLEI-E Index: Bledsoe Enlightenment Performance Research Index, Version 1.0 — is authored by **Dashawn Ramel Bledsoe** as a personal quantitative research methodology and individual intellectual property instrument. It is dated Friday, 26 June 2026.

This document does not constitute:

- Financial advice of any kind
- A securities offering, private placement, or investment solicitation
- A guarantee of future performance, income, or licensing revenue
- Legal advice or an attorney-client relationship

All financial instrument references — including the BLEI-E Bond Framework described in Section 11 — are presented for **research and conceptual purposes only**. No actual securities instrument is being offered, sold, or solicited herein.

The BLEI-E Index is a novel, proprietary methodology. Score benchmarks, licensing fee estimates, and revenue projections contained in this document

are research estimates only and do not represent guaranteed outcomes.

Before executing any licensing agreement, NDA, securities instrument, or commercial contract based on or derived from this index, consult:

- A licensed attorney qualified in intellectual property and sports law
- A licensed financial advisor or registered investment advisor (RIA)
- A securities attorney if any financial instrument issuance is contemplated
